

Artifit Ultra-thin & 10-Foot-Drop Tested Shock-Proof iPhone Case – The Best Choice to Protect Your iPhone

SAN FRANCISCO, CA, US, June 20, 2018 /EINPresswire.com/ -- iPhone is an outstanding smartphone with the superb design and excellent display, but it's not exactly the most durable device on the market. Phone maintenance store owners were surely jumping for joy when Apple announced that its iPhone 8 and 8 Plus handsets would feature glass, as well as iPhone X. Even though Apple says it's its most durable glass ever, there's no telling when your phone might decide to make a break for freedom from your hand – especially with the plus-size handsets.

Infamously, the first iPhone 6 sold to consumers was immediately dropped onto the ground. Accidents happen. Drops, scrapes, and even bending can drastically leave your iPhone in an inoperable state. If you want to protect your shiny new gadget, a tough, rugged iPhone case that can take the knocks is exactly what you need. So here comes our pick of protective jacket for your iPhone—— Artifit shock-proof iPhone case.

TPU & TPE Dual-layer Shock Protection

In terms of protection, Artifit iPhone case offers drop proofing and shock proofing. It has also been certificated by SGS organization to handle the drop test from 10 feet high, which means it offers solid drop protection even though your iPhone accidentally slips from the 2nd floor onto the ground. Absorbent TPU layer provides the powerful drop proofing feature because it disperses the shock of a drop throughout the case. The inner side of frame also has TPE corner bumper which will provide dual-layer shock absorption and add protection against bumps and drops. If your device falls face down, your screen takes a direct hit. But the raised bevel makes sure that the impact is absorbed by the phone case instead of the phone. The absorbent TPU layer, raised bevel and TPE corner bumper, these all will go a long way to keep your iPhone safe.

Ultra-thin and Lightweight

Just because Artifit iPhone cases are super protective, that doesn't mean they have to be ugly brick-style cases. If you're looking for an ultra-thin and lightweight case, Artifit totally can do the trick. Artifit iPhone X case with the weight of 1.16oz and thickness of 0.06in is one of the thinnest and most lightweight shock-proof cases you can buy. This case is not only relatively light and thin, but also comfortable to hold. It has built-in button covers, and precise cut-outs for the camera, port, and switch.

Minimalism

Dressing your iPhone in a protective case will not only reduce the probability of cracking a screen or causing any other damage, but it'll also give you the opportunity to truly make your iPhone your own. We appreciate the case's thinness, light weight, as well as the unique minimal design. Without any fancy decorations and glorious design, Artific is crafted as a symbol of minimalism whilst offering extreme protection.

This combination of style and protection will resonate with you in a way other cases simply can't match. So, buy an Artifit iPhone case now and save yourself from heartbreak later.

Artifit iPhone cases are now available for iPhone X, iPhone 8 Plus, iPhone 7 Plus, iPhone 8/7/6s/6, with 3 color choices of rose gold, black and space gray.
