

# Refined Sugar is the major cause of the Increase in Hair Loss

*Genetic Hair Loss, Hypertension, Hyperglycemia and Coronary Heart problems are all linked. Fructose causes the inflammation*

SYDNEY, AUSTRALIA, June 14, 2018 /EINPresswire.com/ -- FRUCTOSE IS MAJOR CAUSE OF INCREASE IN HAIR LOSS

The intake of refined sugars in the major cause of the increase in hair loss"

*David Salinger*

David Salinger, Director of the non-profit International Association of Trichologists, that trains students throughout the world, says that fructose (refined sugar) is the main reason for the increase in hair loss. The link

between genetic hair loss, hypertension, high blood glucose levels and coronary heart disease is now well established. The major contributing cause to all of these problems is inflammation caused by the intake of refined sugars. Fructose increases free radicals which, in turn, causes the inflammation central to all these problems.

This topic will be discussed at the World Trichology Conference taking place in Washington D.C. on June 25th and 26th.
