[Mask Inspection System Market 2018](#)

This report studies the global Mask Inspection System market status and forecast, categorizes the global Mask Inspection System market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in United States, Europe, China, Japan, South Korea and Taiwan and other regions.

Mask Inspection System is fab equipment that is used, before lithography, to inspect photomasks for defects during the production of semiconductor wafers. It is also used for R&D purposes. The increase in the application of semiconductor integrated circuits (ICs) in segments like consumer electronics, automobiles, and industries is prompting IC vendors to raise their production scales. This will compel the vendors to demand more Mask Inspection System to ensure maximum reliability of their offerings.

The semiconductor market is shifting toward complex and miniaturized devices. Semiconductor device manufacturers need higher inspection sensitivity as they move toward lower node sizes (10nm and beyond). The migration will introduce complex structures and designs, as well as new materials.
