Description:

Global Machine Learning as a Service Market Outlook
Market Overview

Global digitization and IoT revolution led to huge data generation from global data sources like internet sites, mobile applications, big companies and economy. Huge data generated is useless without proper processing and utilization. Many different machine learning processes and algorithms are developed and used to extract important knowledge from data such as consumer behavior, weather forecasting, scientific modeling among others. Machine learning as a service is a branch of artificial intelligence (AI) used for various applications such as data analyzing and to make real-time decisions without any human interference. Extensive applications of machine learning led many industries to opt for machine learning as a service to achieve better productivity and efficiency of business. Many industries are highly benefitted by the adoption of machine learning technology in their business. The finance industry was using machine learning services for credit checking and fraud investigation. But in past few years with more developed technology, the financial sector is using machine learning for loan approval and risk assessments. Introduction of autonomous vehicles to overcome automobile death rates attributed to human error is expected to revolutionize the automotive industry. In September 2016, Google, Facebook, IBM, Microsoft and Amazon announced partnership on AI technology to work on AI researches together; later the partnership was joined by Apple too.
