

# The Injectable Drug Delivery Market is expected to reach \$39.6 billion by 2023

*The self-injection devices segment is expected to have a healthy growth rate due to factors such as growth of Biotechnology and pharmaceuticals based research.*

HYDERABAD, TELANGANA, INDIA, June 19, 2018 /EINPresswire.com/ -- According to the new market research report by [IndustryARC](#) titled "Injectable Drug Delivery Market By Devices, Therapeutics & Formulations [Self-Injection Devices (Pen, Needle Free & Auto Injectors), Auto-Immune Diseases, Diabetes, Oncology, Hormonal Disorders, Liposomes, Microspheres, Nanoparticles, Polymeric Micelles] - Forecast (2018 - 2023)", the market is driven by the growth of the Biologics during the forecast period.

North America dominates the Injectable Drug Delivery Market

North America holds a major share in the Injectable Drug Delivery Market. In the US, chronic disease like heart diseases, diabetes, cancer, stroke, chronic obstructive pulmonary disorder, etc are prevalent. These factors drive the demand for the formulations. The number of Americans suffering from diabetes could triple by 2050.

Favourable business environment, government support, and surge of biologics propel the demand for the injectable drug delivery devices in North America.

Selected Analysis in the full Report:

Self-injection devices include auto injectors, pen injectors, and needle free injectors. These devices are used for self-administration of medication by the patients. They are used for administration of injectable drug modules such as insulin, interferon, follicle stimulating hormone, and human growth hormone. Insulin dependent diabetes is the main therapeutic area for application of self-injection devices.

The self-injection devices segment is expected to have a healthy growth rate due to factors such as growth of Biotechnology and pharmaceuticals based research. Growing incidences of diabetes is also another factor for the growth of self-injection devices.
