

Soliton Cyber & Analytics Announces WrappingBox Wins First Place “Best of Show” Grand Prix Award at Interop Tokyo 2018

WrappingBox Technology Honored in Security Products Category for Innovation in Controlling Access to and Protecting Confidential Company Information

LONG BEACH, CA, UNITED STATES, June 20, 2018 /EINPresswire.com/ --

[Soliton Cyber & Analytics](#) (Soliton) announces that WrappingBox, a key component of [Soliton SecureShield](#), the Company's data access and security solution, captured First Place in “Best of Show” Grand Prix Award in the Security Product Category at Interop Tokyo 2018, held from June 13, 2018 to June 15, 2018. The recognition reflects Soliton's commitment to delivering industry-leading technology while simplifying the complexities of secure remote computing.

“

SecureShield takes secure browsing to the next level; not only do we prevent data leakage and contain malware attacks, but we improve the user experience and functionality using application wrapping.”

Chad Kime, Chief Operating Officer with Soliton Cyber & Analytics

WrappingBox is a unique, patented application-wrapping technology developed by Soliton's parent company, Soliton Systems Co., Ltd. WrappingBox creates a secure browser workspace that exists only as an encrypted application within a PC's memory. This encrypted application can see local resources on the endpoint, but the endpoint does not have visibility within the application. The application will also self-delete when the user exits the application and remove all traces of itself from the endpoint. WrappingBox launches common PC applications (such as MS Word, MS Excel and Adobe Acrobat) within the endpoint's memory and creates a SSL-VPN connection to the corporate environment. Companies using WrappingBox can allow remote workers to enjoy the functionality of their PC, knowing that built-in

security is working to prevent the data from being leaked.

Soliton SecureShield incorporates the WrappingBox application-wrapping technology within a more comprehensive solution that allows access to internal files, cloud applications and multiple options for multi-factor authentication. SecureShield offers solutions for Mac, iOS and Android operating systems to allow convenient access to business resources and corporate data from anywhere, while reducing the risk of malware infections or data loss.

As one of the largest network computing trade shows in Asia, Interop Tokyo is renowned for being a top global business technology event, showcasing the latest in cutting-edge networking products,

solutions and services from vendors across the world. About 500 organizations participated in Interop Tokyo 2018, exhibiting products, solutions and services released in 2017. Interop Tokyo Best of Show Awards are given to the most outstanding products and services on display at Interop Tokyo, following a judging process by influential members of the IT industry.

“Today’s digital workforce relies heavily on anywhere access to web apps and cloud resources from virtually any device. Meanwhile, as hackers up the ante, IT teams need more control over web access to reduce the risk of malware and prevent data leakage – even on devices they don’t directly control such as a contractor’s computer or an executive’s personal cellphone,” explains Chad Kime, Chief Operating Officer with Soliton Cyber & Analytics. “SecureShield takes secure browsing to the next level; not only do we prevent data leakage and contain malware attacks, but we improve the user experience and functionality using application wrapping. We are delighted that WrappingBox has received such high recognition. It’s a major honor and a strong testament to our commitment of providing solutions that make secure access to your enterprise data fast, simple and affordable.”
