Gear couplings are a type of flexible couplings that have forged sleeves. In addition, they are equipped with two hubs with teeth for transmitting torque from the motor to the driven shaft. The global couplings market is the parent market of the global gear couplings market, which includes elastomeric coupling, mechanical couplings, and metallic couplings. Couplings are an integral part of power transmission systems and are used for connecting the shaft of the driving and driven impellers. Couplings ensure the transmission of power and torque from one shaft to another, without any loss of energy and wear and tear of systems.

The analysts forecast the global gear couplings market to grow at a CAGR of 4.67% during the period 2017-2021.
