Barrier system is one of the important elements of road safety management and is used to maintain safety on road for pedestrians as well as drivers. Increasing accidents and fatalities have driven the growth of the barrier systems market. Road safety regulations such as expanding crash barriers across the highways and roads have improved, especially in developing countries from APAC. Quick and safe transport results in the development of a nation's economy by improving trades and connectivity.

On the basis of material, metal safety barriers accounted for the largest market share. Metal safety barriers can be easily repaired, in case of damage due to collision, thus increasing their life. The most commonly used metals for safety barriers include steel, iron, and aluminum. Based on type, crash barrier systems are the most widely used barrier systems. Crash barrier systems are installed along highways in order to minimize the impact of vehicles at high speeds and prevent injuries and fatalities. With the emergence of new technologies, manufacturers have started to adopt advanced techniques to make crash barriers safer.
