Membrane chemicals are the variants of specialty chemicals that are formulated to treat a vast range of RO/UF/NF/MF membrane foulants and scalants. In water intensive industries such as power, chemical, F&B, etc., demand for process water is outstripping the supply, due to which these industries have to recycle the wastewater to meet their daily operational requirements. Membranes are leveraged across various industries to eliminate these contaminants.

The Asia-Pacific region is projected to grow significantly during the forecast period with developing nations, such as China and India, adopting strict environmental regulations.

The global Membrane Chemicals market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
