

# Clarion Water Technologies Develops Its Activity in Hazardous Waste in China with a Joint Venture

*This joint-venture will allow the parties to combine their complementary expertise in hazardous waste treatment to offer local and tailor-made solutions*

SHANGHAI, PUDONG, CHINA, July 3, 2018 /EINPresswire.com/ -- [Clarion Water Technologies](https://www.einpresswire.com/clarion-water-technologies) (ISIN: [CN0732587216](https://www.einpresswire.com/cn0732587216)), an independently owned water and wastewater treatment specialist headquartered in Shanghai that is providing a comprehensive package of bespoke water management solutions, reach that extends across China, is pleased to announce that it has signed an agreement that establishes a joint venture that will focus on the development of industrial hazardous waste treatment.

Subject to regulatory approval, its yet undisclosed partners, a recognized environmental company and a hazardous waste integrated utilization and treatment services company, will be committed to the development of an integrated waste treatment plant with a designed capacity of 10,000 tons per year in order to meet the city's needs of hazardous waste treatment.

According to the agreement, with a shared capital investment the new joint venture will provide professional hazardous and industrial waste treatment solutions. The business scopes range widely from collection, storage and incineration of the special waste, sales of steam and other by-products derived from the treatment process, and provision of any related secondary services, to soil contamination remediation.

The city that will benefit from this investment is a major industrial hub, with an astounding number of hazardous waste generated each year. The official environmental report showed the hazardous waste volume has risen over twofold increase within the last 4 years, from 10,000 tons to 29,000 tons and growing at a fast pace.

Our partner's core businesses include the recycling of scrap metals, the design, manufacturing, and sales of high and low voltage transformers, electrical resistors, and other supplementary products, thus extending the industrial chain and achieving the recycling process of scrap metal resources. Its hazardous waste incineration plant is one of the largest of its kind in China which is equipped to recover the excess of heat during the treatment process and turn it into steam, fueling the supply of renewable energy to other industries operating in the park.

[About Clarion Water Technologies](https://www.einpresswire.com/about-clarion-water-technologies) (ISIN: CN0732587216)

Clarion Water Technologies is a water and wastewater treatment specialist. Headquartered in

Shanghai, China, Clarion Water Technologies is an independently owned water treatment company.
