

Quality Resolution Systems, LLC Announces Plans for Automotive Manufacturing Training Facility

Detroit Manufacturer Training Facility to provide employees at Ford, FCA, and GM the leverage and added competence needed to succeed

DETROIT, MI, UNITED STATES, July 14, 2018

/EINPresswire.com/ -- [Quality Resolution Systems, LLC](#), a Detroit, Michigan consultancy firm, is ready to expand and add a Development of Manufacturing Training Facility, its publicist announced today. The move is expected to solve core issues facing processes from America's "Big Three," automobile industry.

General Motors, Ford Motor Company, and Fiat Chrysler Automobiles are internationally recognized as "The Big Three" and are the largest automakers in America. Detroit, Michigan is the headquarters for each of them.

[Kiara Thomas](#), CEO of Quality Resolution Systems, LLC, says that after seven years of working with and for GM, Ford, FCA or one of their major suppliers, she noticed a pattern of reoccurring problems resistant to solutions. As both an advocate and participant of a growing and thriving workforce, Kiara Thomas says that change is needed if there is going to be any resolve.

In response, Quality Resolution Systems, LLC rolled out a two to five year plan which involves the "Big Three" automotive industry. Training modules and courses include learning manufacturing processes such as machining, welding, and injection molding; as well as commodities like sheet metal and general assembly.

"Learning union rules, how to deal with conflict, and how to successfully work in unionized plants, will provide individuals working in Ford, FCA, and GM manufacturing plants the leverage and added competence they need to succeed," explained Thomas. "Funding for the Manufacturing Training Facility will be provided by Ford, FCA, and GM."

"These moves are both innovative and strategic by nature," stated [Fran Briggs](#), Publicist to Quality Resolution Systems, LLC. "That means, QRS, LLC is poised to continue to add strength to the economy."

"Individuals will be trained on processes and general products that are involved in the production of a vehicle," said Kiara Thomas. "There will also be a non-profit side which trains teenagers the trades within the automotive industry, and a summer camp/after-school program for youth interested in Math, Science, Automation, and Technology," she added.
