PUNE, MAHARASHTRA, INDIA, August 8, 2018 /EINPresswire.com/ -- MarketResearchNest.com adds "Global [Pheromones Market](#) 2018 by Manufacturers, Regions, Type and Application, Forecast to 2023" new reports to its research database. The report spread across 135 pages with tables and figures in it.

Pheromones are chemicals produced as messengers that affect the behavior of other individuals of insects or other animals. They are usually wind borne but may be placed on soil, vegetation or various items. Each species of insect relies on some one hundred chemicals in its life, to engage in such routine activities as finding food and mates, aggregating to take advantage of food resources, protecting sites of oviposition, and escaping predation. It has been found that pheromones may convey different signals when presented in combinations or concentrations. Pheromones differ from sight or sound signals in a number of ways. They travel slowly, do not fade quickly, and are effective over a long range. Sound and sight receptors are not needed for pheromone detection, and pheromone direction is not limited to straight lines.
