

# IBGX to bridge the gap in cryptocurrency trading.

HONG KONG, CHINA, August 22, 2018 /EINPresswire.com/ -- The value of trading volume on major blockchain exchanges has grown exponentially over the past two years. This metric equates to the amount of cryptocurrency coins traded within a 24-hour period and is therefore crucial to understanding the state of the market.

With the growing number of exchanges, currencies and transactions, the growth in the cryptocurrency market creates a newfound gap – the need for OTC trading platforms for high trade volumes. By accessing funds through liquidity providers and processing large transactions outside of exchanges, OTC platforms reduce the barriers to entry and fill this market need.

The market growth does not appear to be slowing down anytime soon, either. In March 2018, fintech leaders from across the globe forecasted the top 10 cryptocurrencies by market capitalisation, as well as the top two trending coins, compiling the results in a monthly Cryptocurrency Predictions Report.

The fintech leaders predicted positive price growth by the year's end for all coins – the first time this has occurred since the report began. Cryptocurrency exchanges are the best platforms to monitor the latest price fluctuations immediately. With “live” price and instant trading functions, traders can swiftly capitalize on any opportunities when they present themselves.

IBGX, set to launch in Q3 2018, is one such trading exchange that will offer these services. Traders can expect a user friendly yet very functional and comprehensive interface where even the newest of traders will have no problems navigating through the trading platform. IBGX is

**INTERBLOCKCHAIN  
GROUP EXCHANGE**

made up of a team with the expertise in both IT engineering and cryptocurrency trading, aspiring to help fellow traders, new and experienced, to up their game in cryptocurrency investments.
