# No risks here: IT Governance launches Business Continuity Risk Management Pack

ELY, CAMBRIDGESHIRE, UNITED KINGDOM, August 24, 2018 /EINPresswire.com/ -- Ely, United Kingdom, 24 August 2018 – IT Governance continues to provide the solutions organisations need when disaster strikes with the launch of its Business Continuity Risk Management Pack.

Your organisation may already have business continuity plans in place, but are you confident they can help your organisation survive disaster?

Although the threat of cyber attacks and natural disasters is nothing new, the importance of having effective business continuity plans in place is growing daily. No two organisations are the same, and the risks to an organisation's critical functions are equally unique.

The Business Continuity Risk Management Pack will help you gain a complete picture of the risks and threats your organisation faces, and be fully prepared to quickly recover critical business functions in the event of disruption. It provides templates and guidance for performing a risk assessment, developing a risk register and performing a comprehensive business impact analysis to enable you to develop business continuity plans tailored to your organisation's individual risk appetite.

You can buy your Business Continuity Risk Management Pack here.
