

Vol, Equity Deriv Products To Find Increased Traction In Europe, Asia In 2019

LONDON, UNITED KINGDOM, August 23, 2018 /EINPresswire.com/ --

The use of global volatility and equity derivatives products and instruments will increase at a faster rate among investors in Europe and Asia than those based in the Americas over the

next 12 months, according to global hedge funds and institutional investors, as set out in EQDerivatives' latest Equity & Volatility Derivatives Report - "Real Flows, Real Views." Variance and volatility swaps, dispersion and correlation were identified by investors as instruments primed for further growth going forward, with global hedge funds and institutional investors collectively expecting to expand their usage of equity derivative and volatility products by 43% over the next 12 months. The key findings of the report cover the increasing demand for investors for sellside modelling of strategies, a requirement for the creation of a liquid Asia Pacific volatility product as well as calls for improvements in settlement processes for some listed volatility products. The latest report also includes an 'Alpha-Seeking Review' - relating to an institution's allocation of derivatives to alpha seeking strategies. In terms of rankings by hedge funds and institutional investors of banks, Societe Generale, Goldman Sachs, J.P. Morgan, UBS and BNP Paribas all ranked highly across specific regions and products. Subscribers to EQDerivatives can access the table of contents and introduction to the report by clicking on the above headline.

EQDerivatives
Connecting Buysiders, Allocators & Market Makers

To find out more or to purchase the report, please contact Peter Thompson (thompson@eqderivatives.com) or Pat Fay (fay@eqderivatives.com).

This EQDerivatives Market Mapping project continues our independent, in-depth look at the equity and volatility derivatives market, including its potential for growth in the coming years. The report is formed from the views of buysiders around the globe: asset managers, hedge funds, pension funds, private banks, family offices and insurance companies. The findings and analysis provide a map of how equity and volatility derivatives are deployed by managers globally.
