

Pivot Joins Amazon Web Services Partner Network

Pivot is now a Technology Partner on the Amazon Web Services Partner Network.

KANSAS CITY, MO, UNITED STATES, August 28, 2018 /EINPresswire.com/ -- [Pivot](#)™ is pleased to share that it is now a Technology Partner in the AWS Partner Network (APN)! Our key products, [InSite Pro](#)™ and [Integra Link](#)®, leverage AWS technologies to deliver intelligent asset management information to several verticals including oil and gas, electric transmission and utilities, transportation, and telecommunications, as well as the engineering and construction industry.

“Joining the APN is a critical step in our strategy,” says Jason Credit, Sr. Director of Technology. “The software we provide to infrastructure markets requires the ability to scale rapidly; providing geoprocessing for enormous data sets, and quickly delivering information to a variety of end-users. Of course, providing the highest security is always top of mind. With the power of AWS and other APN partners, we are able to maintain stringent security standards, while delivering our data-rich solutions, at a speed that outpaces our competition significantly.”

As a member of the APN, Pivot will work in cooperation with AWS to securely deliver InSite Pro and Integra Link to infrastructure organizations and service providers to better manage the data produced during design, engineering and construction projects. But, we don't stop there. Our solutions, available at <http://pivot.com/products> provide a platform for ongoing monitoring of assets after they are built for integrity, public awareness, and environmental protection – resulting in a platform that can truly span an asset's lifecycle.

“A key differentiator to note is our propriety database curated from over 800 public and private sources,” says Kent Strasser, Principal Technologist. “We've created an environment in the cloud that allows operators and engineers to better understand environmental, engineering, construction, land, and socio-economic factors surrounding their assets. It's a living “ecosystem” that's continuously updating and supports better route design, monitoring of construction projects (including public sentiment), and enhanced integrity management efforts.”

Pivot's platform is in use by hundreds of companies and thousands of users. Its fast, familiar, and secure user interface allows anyone from field crews to board members to view and interact with the data. Contact us at <http://pivot.com> to learn more.
