

The Digital Signature market is projected to reach at an estimated CAGR of 34% during the forecast period 2018-2023

A digital signature helps in improving communication between public and private sector.

HYDERABAD, TELANGANA, INDIA, September 4, 2018 /EINPresswire.com/ -- Online banking activities and cryptocurrency will drive the market for [digital signature](#)

A digital signature is an electronic signature that is used to find the authenticity of the sender and also to make sure that the message was not altered during the transit. Digital signatures in many countries including members of the European Union (EU), Saudi Arabia and the United States are considered as legal binding.

A digital signature helps in improving communication between public and private sector. The advancement of technologies, enhancing data integrity, verifying digital documents, like court documents, patient consents and cash management documents are the driving factors for the growth of the digital signature market.

A digital signature can be operated using desktop application only and cannot provide a mobile or web based digital experience. It is difficult and expensive to connect a signature to the phone, whereas web requires additional plugins for supporting the application. The use of application over limited device is the major challenge that needs to be addressed in this signature market.
