HYDERABAD, TELANGANA, INDIA, September 4, 2018 /EINPresswire.com/ -- [Grape Seed Oil](#) rich in antioxidants

The grape seed oil market is projected to witness high growth in coming years due to the presence of advanced chemical components in the oil. Components, such as linoleic acid contains 80 per cent of fatty acids which are used as powerful antioxidants to fight against ageing and lower the risk of diabetes and heart disease. Hence, the grape seed oil is gaining a good demand, especially in the cosmetic and health care industries.

Grape seed oil is applicable in various industries such as food & beverage, cosmetic, supplements and healthcare and many others. This oil contains polyphenols and flavonoids that are used against the protection of cellular and tissue damage. Omega-3, Omega-6, and Omega-9 are the fatty acids found in this oil and these fatty acids help in curing any heart diseases and influence the biological properties in the body.

Grape seed oil is a byproduct of wine grapes and is discarded during the wine making process. The extraction of this oil can be used in an efficient way and also to gain profit. The major grape seed oil producing countries are Italy, France, Spain, the U.S, Australia, China, Chile, South Africa, and Argentina. Among these, France produces probably 40% of the world's entire production of grape seed oil. Research report shows that the component called ethanol that occurs in grape seed oil extraction process is used in the petroleum industry as an admixture to petrol. So this encourages the wine making industry to reuse the waste to a profitable line.

Researchers found that the global wine production leaves an estimated 13 million tons of grape mark that can evaporate up to 400 liters of bioethanol which is used in production of liquid biofuel. Using plant biomass for the production of liquid biofuels can be difficult because it is very costly; and extensive use of edible oil for biodiesel production may lead to food crisis. Therefore biodiesel produced from edible vegetable oils is currently not economically feasible. Industries with a potential evolution for biofuel processing through plants biomass can add value to the grape seed oil for an environmentally friendly biofuel.
