

Systems Consulting Services, Inc (SCSI)© launches SmartOrder© for 3rd Party Data Ordering Rules and Risk Management

And answers "What do we do when our data connections to 3rd Party Data go down?" as well as "How can we avoid ordering more data than we need for Underwriting?"

ELLCOTT CITY, MD, USA, September 6, 2018 /EINPresswire.com/ -- [SCSI](#)©, a leading provider of underwriting solutions to the Insurance and Financial Industries, is proud to announce the release of SmartOrder©, a complementary product to their flagship solution jBIAS©. SmartOrder© launches today and offers the following:

- SmartOrder© Vendor Failover Protection - What happens when your source of underwriting data goes down or your connection slows? Before SmartOrder©, you had to wait for the notice from your vendor that connectivity had been restored. With SmartOrder©, you can rapidly change your data source with little impact to your customers or stakeholders.
- SmartOrder© Rules - Your Underwriting team has gathered a lot of data over the years and can use key indicators in your data to determine how much more is needed to generate a quote. What if these years of experience could be captured in a system and updated as new trends and indicators are identified? Using this information companies can avoid ordering more reports than necessary as well as duplicating data that they might already have. This can all be stored and used to automate your report ordering in SmartOrder©.
- SmartOrder© Analytics – Have you ever wondered if one data source may be more accurate than another? Or if one provider offers more reliable data in one state over another? Now you can identify these trends and more combining the power of SmartOrder© with the access provided by jBIAS©.

The cornerstone of any automated underwriting system is good data, typically accessed from outside sources and combined with data provided by the customer. SmartOrder© powered by jBIAS© provides the most out-of-the-box integrations with 3rd Party Data Providers, currently providing access to 15 vendors and over 50 reports. The Java-based solution allows for customers to be operational in a matter of hours, not the months or even years that it can take for companies to create their own integrations. Better still, the data is aggregated into one consistent architecture regardless of source.

"Insurance companies and financial institutions have been asking for a product like SmartOrder© for some time," states SCSI© President and Co-Founder Ken Wayman. "We anticipate customers will realize tremendous cost savings from not ordering reports for data they already have or don't need. Additionally, we're excited to give customers the peace of mind that comes from knowing that they have options in the event that their data source goes down."

About Systems Consulting Services, Inc.©

For over 30 years, SCSI© has led the field of underwriting software through dedication to product excellence and outstanding customer service. Headed by Ken Wayman, President, and Anne Ostrom, Vice President, the company has built a loyal customer base largely through word-of-mouth referrals from successful implementations of their flagship product, jBIAS©, an automated data retrieval software system. The company is proud to serve over 11,000 users at more than 20 locations across the United States.
