“

Rising demand of bio-based chemicals with low environment impact is likely to crank up the global crop protection market”

OMR Analyst

Crop protection is an agricultural practice that is generally employed to manage plant diseases, weeds and other pests which damage crops. Crop protection includes various approaches such as pesticide-based approach, biological pest control approach, barrier-based approach, animal psychology-based approach and biotechnology based approach. Herbicides, insecticides and fungicides are considered as pesticide-based approach. Herbicides

holds the largest market segment of the crop protection market. Rising need of pest-free crops forces farmers to use crop protection solutions. With increasing population and their rising demand of food products will drive the agricultural sector which is likely to drive crop protection market. The extensive use of herbicides and weed control in the agricultural practices further supports the growth of crop protection market.

On the basis of geography, the crop protection market is bifurcated into four major regions –

North America, Asia- Pacific(APAC) technological advancements and various government initiatives in the agricultural sector. Furthermore, the Asia- Pacific region is expected to show higher growth in the forecast period due to its emerging economies India and China. India is primarily agricultural-based country having total production of agriculture sector as \$367 billion (Central Intelligence Agency, 2014). Furthermore, India's GDP is growing significantly and is considerably supported by agriculture sector which is expected to drive the crop protection market in the region.
