

# Australian-based company offers EVA mats that will improve child safety

---

*Australian company offer foam floor tiles design to protect children from falls at home and at child care play areas.*

SYDNEY, NSW, AUSTRALIA, September 27, 2018 /EINPresswire.com/ -- Australian-based company offers [EVA mats](#) that will improve child safety.

Summary: Ezymats provides [EVA foam tiles](#) that are proven to reduce the risk of injury for children in play areas. They offer an alternative and much safer option compared to traditional foam mats.

Ezymats is one of the top suppliers of EVA mats in Australia. They provide [safety flooring](#) for many different customers, including schools, indoor play areas, daycare centres, and domestic customers as well.

The EVA foam tiles they provide are shown to help prevent injury during playtime. When young children are playing - regardless of whether this is in the home or in a dedicated play area - there's always a high risk of injuries occurring through falls. Small kids may struggle to stay on their feet and are prone to tripping up or falling off play equipment. When the safety flooring isn't designed correctly, it can cause bruising and injuries due to the brittle nature of children's bones.

## A safer flooring option

Ezymats identifies a few critical differences in their EVA foam compared to other safety flooring options. EVA as a material is naturally very soft and durable, offering ample protection for anyone that falls onto it. It provides a cushioned fall, which helps prevent the impact on joints and bones in young children. As a result, there will be less chance of injuries occurring during playtime.

The mats themselves come in three different thicknesses; 20mm, 30mm or 40mm. The thicker the mat, the more protection and cushioning it can deliver. Ezymats suggests that a thicker mat is chosen dependent on how vigorous the activity is. For home play areas, a lighter thickness may be all that's required. However, for professional indoor play areas where a variety of high-impact activities take place, then a thicker option is more effective. Each mat comes in 1m x 1m and can be interlocked with other EVA foam tiles like a jigsaw puzzle. Another unique feature of this safety flooring is that it can very easily be cut with a knife. This means the tiles can be cut and fitted around awkward areas such as furniture or play equipment. They also come in different colours - blue/red, black/grey, and black/red - with custom colour schemes also available.

## The future for Ezymats

As a company that focuses on safety, Ezymats is determined to offer the best solutions to minimise injuries for small children. EVA foam is most certainly a giant step in the right direction to reduce the number of severe injuries in child's play areas - both commercially and inside the home. The properties of this particular material make it comfortable for kids to play on, but also

a lot safer too. As such, parents and children's play area owners can feel more at ease that there will be fewer accidents during playtime.

More information on Ezymats and their EVA foam mats can be found by visiting [www.ezymats.com.au](http://www.ezymats.com.au).
