

Deploying REVE Antivirus is a Productivity Improvement Investment

Most companies think that investing in a security solution is an additional cost but they fail to realize that it's an investment.

BUKIT BATOK, SINGAPORE, September 27, 2018 /EINPresswire.com/ -- REVE Antivirus the leading antivirus software provider has been in the security industry since last 2 years. With a stable line of products for home & small business users, REVE Antivirus has moved ahead towards the enterprise segment launching its [Endpoint Security Solutions](#).

Endpoint SECURITY
Giving you complete control of your office network & **DIGITAL SECURITY**

Endpoint Security Solutions

According to REVE Antivirus, most companies think that investing in a security solution is an additional cost but they fail to realize that it's an investment, which comes with a higher return.

“

Investing in an IT security software, a company can not only secure its data from 3rd party attacks but also help it remain safe from being leaked by internal employees.”

REVE Antivirus CEO Mr. Sanjit Chatterjee says

REVE Antivirus CEO Mr. Sanjit Chatterjee says, “Investing in an IT security software, a company can not only secure its data from 3rd party attacks but also help it remain safe from being leaked by internal employees.”

He further adds, “It's seen that most data breaches happen by internal colleagues willingly or accidentally. An endpoint protection software helps in preventing these breaches by restricting data transfers outside the network”

An Endpoint security solution helps the IT Admin to keep a track of several crucial elements such as system ideal time, hours spent on social channels etc., which helps an organization measure the productivity of its staff.

Apart from this, a centralized console alerts the admin about the PC health issues such as PC start time, missed software updates, due to which system performance issue occurs thereby hampering the productivity of the organization.

REVE Antivirus has already launched its EPS for Windows and plans for adding Linux & Mac, which is in the future roadmap of the company.
