

LogicalDOC 8.1 Makes Barcode Processing More Flexible and Time Saving

Leading document management solutions provider, LogicalDOC, expands barcode reading capabilities for document automation and processing

FAIR LAWN, NJ, USA, October 2, 2018 /EINPresswire.com/ -- LogicalDOC, the [enterprise document management](#) solution provider, is pleased to announce the upgraded version of its platform, LogicalDOC 8.1, with a single sign-on (CAS) and extended automation features. Other important updates include version promotion, and more efficient and extended barcode facilities.

The new barcode facilities of LogicalDOC 8.1 make it easier, flexible and more efficient for document management. The older version could read several barcode formats (up to 16), and dynamically populate fields and metadata. However, it still had inefficiencies, which have now been removed. The 8.1 version allows creating a 'filter' at the OCR level, which can 'recommend' the barcode processor for the type of barcode to search for.

LogicalDOC logo

The 'filter' feature will greatly reduce the processing time for barcode related procedures. Some other features too have now been introduced. A regular expression can now be used to filter codes in a document, for example, retrieving all codes that start with two initial letters and six digits. The new version can also be set up to recognize specific types of barcodes. This makes reading outcomes more certain and reliable. Another new feature added is that ability to interact with the barcode processor during workflow. Users can pilot the reading of a barcode such that the value obtained goes to fill a field or carry out a select action.

“

Changes to barcode functionalities welcome 100% of our customers' requests; moreover they contribute and combine for document automation of processing”

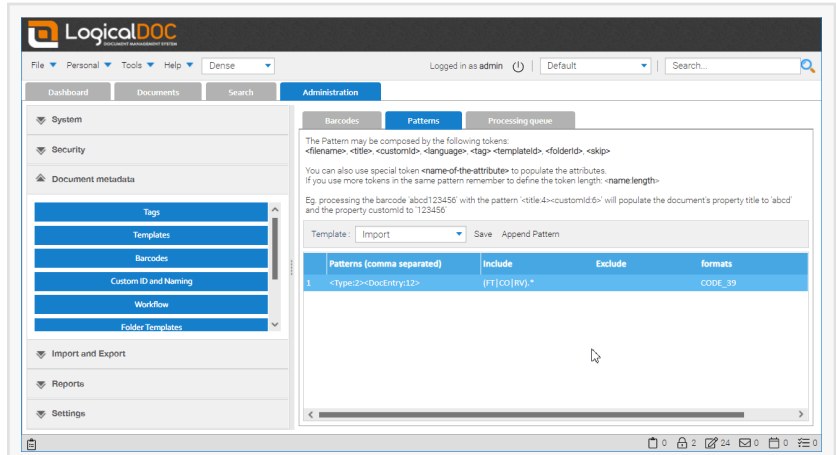

Alessandro Gasparini - CTO

LogicalDOC is a [document management platform](#) that allows for optimizing research with the use of parameters, keywords or full text content. The platform has been created to address the rapid increase in volume of business content. The platform offers a mobile and interoperable environment that is needed in contemporary business situations, with the help of new architectures to solve real world, document centric

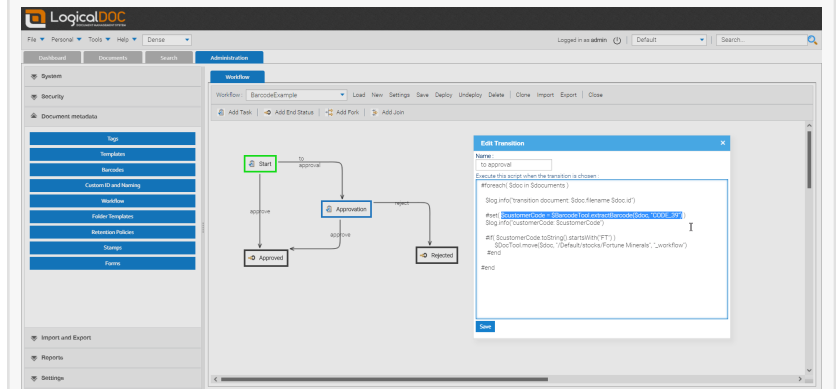

challenges.

Among its solutions, LogicalDOC offers on-premise and cloud-based products that yield huge savings per employee every year. Its products assist companies with collaboration, search and management of business documents across industries and verticals. Available in 15 languages, LogicalDOC users include enterprise architects, IT and business analysts, developers and system integrators. The company's offices are located across the world, and multi-lingual assistants are available for customer support.
