“

Digital transformation for the management of drugs driving the global pharmacy information systems market”

OMR Analyst

Growing digital transformation for the management of drugs is primarily boosting the global pharmacy information systems (PIS) market. PIS has various different function to maintain supply and management of drugs. The system can be coordinated with a computer physician order entry (CPOE) system in the hospital that enables for easier transfer of essential information. PIS is utilized to decrease medication errors, report drug use and tract costs and rising patient safety. In addition, inpatient

pharmacy systems are employed in the hospital setting, whereas outpatient pharmacy information systems are employed in home settings for home [healthcare](#), long-term care facilities, clinics and discharged patients. A large number of capabilities and uses of the PIS system are almost similar for inpatient and outpatient setting. Although, the outpatient PIS is highly focused on drug warnings, medication labeling and instructions for administration. In addition, a data retention plan is also useful in PIS that enables to keep records for a year or more to support physicians and pharmacists to better understand the usage and cost of drugs.

In addition, pharmacists can utilize records of the patients to maintain track of clinical screenings as well as medications and recommendations a patient require regarding healthcare. Moreover, a user interface is useful for all the departments that enables the pharmacists to show detailed patient profiles and work on numerous orders at one time. Due to such benefits, the demand for PIS is expected to accelerate for effective drug management, which in turn will contribute to the market growth.

The report covers

Comprehensive research methodology of Global PIS Market.

This report also includes detailed and extensive market overview with key analyst insights.

Exhaustive analysis of macro and micro factors influencing the market guided by key recommendations.

Analysis of regional regulations and other government policies impacting the Global PIS Market.
