Individuals in the state of Wyoming could have been exposed to asbestos while serving in the US Navy, or while working at a power plant, oil refinery, in the oil, gas or coal production business, as a plumber, a boiler technician, as an auto repairman, as an electrician, or in the construction industry. In most cases, the exposure to asbestos caused mesothelioma at one of these types of workplaces and the exposure took place in the 1950's, 1960's, 1970's, or 1980's. Mesothelioma typically takes three to five decades to appear.
