

Developed World Markets Still Dominate For Environmental Consultancy, New Research Finds

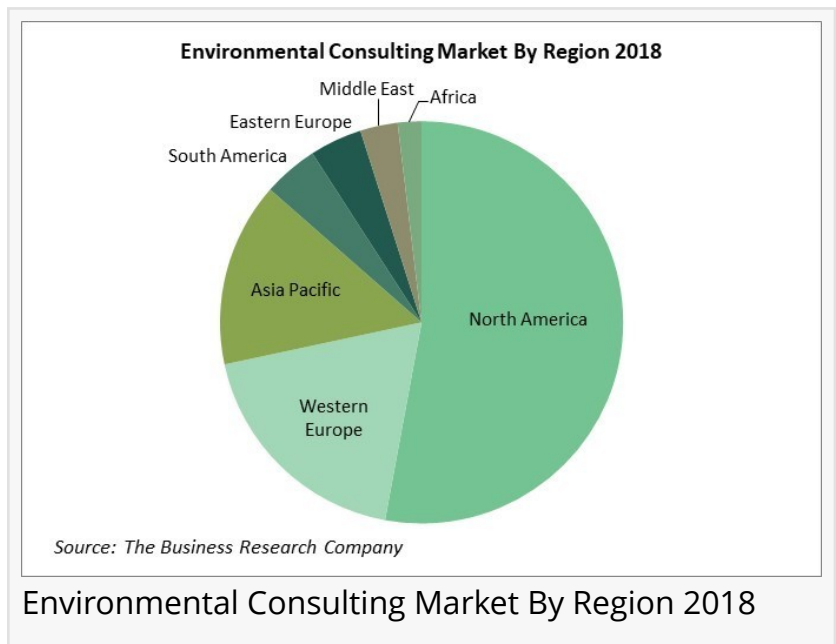

LONDON, GREATER LONDON, UK, November 8, 2018 /EINPresswire.com/ -- Nearly three-quarters of all environmental consultancies' (ECS) 2017 revenues were earned in North America and Europe, Environmental Consulting Services Global Opportunities and Strategies To 2021, as a new report from [The Business Research Company](#) shows, and these markets are continuing to grow as fast as or faster than the markets of Asia Pacific, South America, the Middle East and Africa. North America by itself accounts for over half the ECS industry's sales, while in both Eastern and Western Europe the markets are growing at twice the rate of any other region. ECS growth has, however, slowed in four regions out of seven -

Eastern Europe, Western Europe, South America and the Middle East, but the fact that it has accelerated a tick in its biggest and third biggest markets of North America and Asia Pacific means that global growth has increased slightly.

Environmental consultancies provide advice, assistance, and action plans to organizations and governments to help them manage their environment. Services cover environmental issues such as prevention of environmental contamination and emission of toxic substances, site remediation, water and solid waste management and pollution control. A major source of revenues for the industry is compliance and due diligence services, and climate change and energy policy adherence services. These include services to businesses and other organizations for obtaining licenses as well as compliance with government regulations. The environmental consultancies undertake environmental audits and quality assurance checks, conduct inspections, and help ensure companies comply with environmental laws, regulations and international standards.

The environmental consultancy market is quite fragmented, with the five largest companies together sharing 22.5% of the global total in 2017. Despite this fragmentation, the larger international firms do succeed in competing more successfully for contracts than smaller ones because of their full-service offerings and reputations. In response, many of the smaller international businesses have developed niche skills and expertise. Merger and acquisition activity in the last three years has been at a medium level. A high proportion of deals were carried out by smaller companies in regional markets. Leading deals have included those completed by AECOM, Wood Group, Stantec, Bernhard, and ATC Group.

[Environmental Consulting Services Global Market Opportunities](#) and Strategies To 2021 is one of a series of new industry reports from The Business Research Company that identify opportunities and explain strategies in over 300 markets, covering over 2400 market segments

and 56 geographies. It provides an environmental consulting services overview, environmental consulting services industry analysis, and past environmental consulting services logistics industry statistics and forecasts.
