

Lee Bressler uncovers top-rated stocks leading AI revolution

Microsoft and NVIDIA lead the AI charge on Wall Street.

NEW YORK, NEW YORK, UNITED STATES, November 8, 2018 /EINPresswire.com/ -- As the artificial intelligence revolution continues gathering incredible pace, two big names are leading the way according to [Lee Bressler](#). An investor and technologist from New York with a focus on artificial intelligence and machine learning, Lee Bressler calls [AI technology](#) Wall Street's 'new kid on the block,' with the market set to be worth a staggering \$70 billion within two years based on projections from PricewaterhouseCoopers.

Exploring three of the best-rated stocks according to Wall Street's top analysts, Lee Bressler first turns to Microsoft. Microsoft Corporation (NASDAQ: MSFT) recently acquired California-based AI startup Bonsai in a continued effort to drive its advances within artificial intelligence technology.

Marketed as the world's first deep reinforcement learning platform for enterprise, Microsoft hopes to enhance its own research into AI by leveraging Bonsai's 'Azure' cloud platform. Bonsai marks the third AI acquisition for Microsoft, alongside SwiftKey and Maluuba, in less than two years.

"Microsoft's vision is to make AI more accessible and valuable for all by removing barriers and empowering developers to enter the AI space," suggests Lee Bressler. "Bonsai has already made great progress in this sense – progress Microsoft now wants to build upon."

Wall Street remains largely bullish on Microsoft, yet many analysts suggest that the market is undervaluing the company's 'extremely compelling' story, particularly surrounding AI, machine learning, and cloud computing technology. "Microsoft currently floats a strong buy consensus rating," says Lee Bressler. Analyst price targets on the stock reflect a greater than 13 percent upside from current levels.

Lee Bressler then turns to [NVIDIA](#) Corporation (NASDAQ: NVDA). By leveraging the demand for AI-focused hardware, NVIDIA is taking full advantage of the artificial intelligence revolution.

Three of NVIDIA's current big projects center around deep learning neural networks, real-time facial recognition, and AI-powered video analysis solutions, Bressler reveals.

"NVIDIA stock currently reflects a similar upside to Microsoft at around 14 percent," he adds, wrapping up, "and floats a moderate buy rating according to analysts."
