

# Armour Comms and Global RadioData Communications partner to provide 24/7 support for Armour Mobile solution

*Now available via the Government UK Digital marketplace G-Cloud*

LONDON, UK, November 13, 2018 /EINPresswire.com/ -- Armour Communications, a leading provider of specialist, secure communications solutions, has partnered with Global

RadioData Communications ([GRC](#)) to provide a joint solution with 24/7 support. GRC has already secured its first two customers for the new combined solution that provides additional levels of security. The new service is available via the UK Government Digital Marketplace G-Cloud 10, under the cloud hosting, software and support framework listed as SCYTALE [Armour Comms](#).

“

Clients are demanding higher levels of assurance and support, and we are delighted to be working with GRC to meet this requirement.”

*Dave Holman, Director,  
Armour Comms*

Subscribers to the GRC solution will be able to communicate with other white listed communities, typically, enabling different government departments to communicate securely using Armour Mobile. The service covers all Armour Mobile standard functionality, which includes voice calls, one-to-one and group messaging, voice and video conference calls, file attachments, sent/received/read message status, and Message Burn, a facility where the sender can set a message to disappear after a certain time (for example 5 minutes after it has been sent, or 10 minutes after it has been read by the

recipient).

Steve Slater, Operations Director at GRC commented; “Armour Mobile provides the broadest range of secure communications features currently available for use on an ordinary smartphone, providing security that is transparent to the end user, something that is increasingly important to our user base. Services that provide a consumer-grade look and feel with higher levels of assurance combined with the convenience of using the phone the user already has, means that making and receiving a secure call or communication does not disrupt normal working patterns, helping to ensure user adoption.”

David Holman, a Director at Armour Comms stated; “GRC is our first partner to provide a 24/7 support service from its HQ. Increasingly, clients are demanding higher levels of assurance and support, and we are delighted to be working with GRC to meet this requirement.

Using a FIPS 140-2 validated crypto core, Armour Mobile has been awarded many certifications including Commercial Product Assurance (CPA) from the National Cyber Security Centre (NCSC) and is included in the NATO Information Assurance catalogue.
