

Liposomes - Market Analytics by Application and by Therapeutic Area - Global Market Insight Report by RI Technologies

Liposomes market is divided by Application into Therapeutic, Cosmetic and Other; and by Therapeutics into Anti fungal, Anticancer, Ophthalmic and Other.

HYDERABAD, TELANGANA, INDIA, December 4, 2018

/EINPresswire.com/ -- The unique features of Liposome-formulated drugs are that they remain biologically inert, biocompatible and restrict the cause of unwanted toxic or antigenic reactions. They maintain a high level of popularity in the field of drug research. The application of Liposomes have enormously undergone transformations owing to use in the treatment of solid tumors. The tumors are targeted with Liposomes containing bisphosphonate which reduces the tumor associated macrophages. The other important developments such as use of genetic components as therapeutic molecules have further enhanced the scope of Liposomes based therapy. The components of Liposomes present in the lipid-DNA complexes,

commonly called lipoplexes, combat with the viral gene transfection systems. The market for liposomes presents attractive growth opportunities, driven by growing demand for increasingly effective drugs in the field of pharmaceuticals, and niche applications in other emerging areas.
