

Darline Moore of Sustainability Management Partners to be Featured on CUTV News Radio

EVANSVILLE, INDIANA, UNITED STATES, December 17, 2018 /

EINPresswire.com/ -- One cannot take for granted the air we breathe indoors is good, clean air. Everyone assumes the air we breathe inside our homes and businesses is clean, but it is not! This bad indoor air quality can impact everyone as airborne, germs and bacteria are spread through the HVAC system.

"Know that what you breathe is a choice," says Darline Moore. "We can now give you a choice of the indoor air you breathe! Clean, Clear, Unpolluted indoor air that is our moto."

Darline Moore has more than 20 years of experience in the energy savings and HVAC industry. In 2014, after decades of working for other companies within the energy industry, she embarked on her own journey and created Sustainability Management Partners (SMP), an energy efficiency and indoor air quality (IAQ) consulting company.

Today, SMP is a leader in designing innovative indoor air quality and HVAC solutions for commercial, medical, institutional, residential and new construction projects, to name a few.

Moore is passionate about realizing her vision for creating a company that supports sustainable solutions for today's environment. She is responsible for all aspects of the company, including providing strategic leadership, project designs, contract negotiation, on-boarding and training new employees, and business development on an international level.

"Our main focus is commercial construction, especially K-12 and healthcare. I really like the fact that I can make a difference in school systems and hospitals," says Moore. "Anywhere a lot of people gather, the more people you have, the more bacteria, the more germs, the more dirt, the more particles. Those are the perfect places for us to install our product and make a difference in the building and in people's lives!"

That product is O2Prime, an ion generator that not only improves the air you breathe but saves energy and money. Through the generation of positive and negative ions, O2Prime breaks apart molecules to remove smells, pulls the hydrogen molecule out of mold, bacteria, and pathogens and renders them dead, it removes particles from your breathing zone by agglomerating those

particles (making them larger) to travel back to your filtration system; thereby removing them from the air. Additionally, O2Prime also kills bacteria and germs from surfaces as well such as salmonella and E.coli.

"O2Prime saves energy because you can reduce the amount of outside air you're bringing in to a building, so less heating and air is used thereby saving energy costs, where we can also receive utility rebates for saving energy" says Moore.

"I've created this movement in my community about indoor air quality," says Moore. "It has taken four years, but now I know my message is working because when there is an indoor air quality issue, they call me!"

CUTV News Radio will feature Darline Moore in an interview with Jim Masters on December 19th at 2pm EST.
