

EATENSE, The World's First Digital Dining Plate with Built-in Display, Launches on Indiegogo

EATENSE is the world's first customizable plate that allow users to create their very own personalized plate with a smartphone app.

SEOUL, SOUTH KOREA, December 18, 2018 /EINPresswire.com/ -- Plates are designed in all colors and shapes for the very reason that they are the foremost expression of one's own unique style. With the right presentation, a meal turns into an experience; not only does it encourage the mood for the better, it also leads to an enhanced appetite. However, no one plate is ever enough to suit the diverse tastes of the consumer—that is, until now. Eatense is the world's first customizable plate that allows users to create their very own personalized plate with a smartphone app. Equipped with a digital display, users can turn a simple plate into a one-of-a-kind work of art using designs, photos, and videos from their phone. Eatense captures both creativity and functionality with their easy and accessible features.

Luxurious dining experience should not be limited to the space of a restaurant or to the capacity of a chef; it can and should be enjoyed without having to sacrifice one's convenience.

With the Eatense app and plate, you can customize your plate to suit your style, taste, and mood instantly in the comfort of your home, office, and even outside. Additionally, to complement its adaptable nature, the plate has a sturdy hardware sealed within a waterproof body that is easy to charge; it can be brought anywhere without any difficulties. So, while it has the same features of a normal plate, Eatense defies the idea that plates can't change by combining technical elements to them. With technology, plates are transformed to multi-purposed utilities tailored for the professional setting of a restaurant and for a personal satisfying experience.

The primary features of Eatense include:

- Customization: Can be customized in whichever way to satisfy the user's creativity and needs
- Water-resistance: Can be washed just like any other plates (IPX8)

- Wireless-Charging: Can be charged easily with a wireless charging pad
- A new creative experience through the simple outlet of a smartphone app: Can customize the plate with a unique design and texts that can display a special message for friends and family as well as information about the food like what the ingredients are and how to make it

Eatense is now available for pre-order on Indiegogo with discounted prices starting at \$159. After the campaign, the company anticipates manufacturing and delivery to be fulfilled by the end of July 2019.
