Below are some of the reasons why this device differs from the rest on the market:

>Perfect auto mode launch button keeps released power spark 25 seconds for treatment.

>Uses individual prepackaged disposable high quality copper probe that creates 0.06 mm micro trauma to skin. No bleeding. Spark is stable so there is no need to keep wiping off brown carbon matter during treatment.

>Elegant ergonomical light body design keeps working 3~4 hours when the battery status is full and comes with a 5 year warranty.

The K85 Beierplasm device is based on atmosphere pressure, plasma technology and the system combination of plasma high frequency and voltage. In other words, plasma flash is a heated ionized gas which is a fourth state matter with dynamic sine wave technology and elite engineering that creates a plasma flash. The probe tip doesn't touch the skin. The thermal skin disruption later causes excess skin to dry superficially into tiny crusts which fall off between 5-7 days. Fibroblasts start the process of collagen production which helps to reduce fine lines and wrinkles by inflating, plumping and lifting your skin.
