

Process Liquids? New Video From HPS Reveals Significant Savings From Pigging

Process Pigging Specialists HPS Release New Video Case Study Which Reveals How Pigging is Saving Their Client \$500,000 Every Year

NOTTINGHAM, NOTTINGHAMSHIRE, UNITED KINGDOM, January 3, 2019 /EINPresswire.com/ -- HPS Product Recovery Solutions, the leading specialists in process and hygienic product recovery systems, has released a new video case study. The video demonstrates how an HPS [pigging system](#) is saving a global consumer goods company \$500,000 US dollars every year.

For a one-off investment in a pigging solution, they are saving \$500,000 every single year, meaning they are now more competitive than ever”
Gilbert Murphy

Product recovery, commonly referred to as ‘pigging’, is in use by a wide range of liquid processing industries.

From food, beverage and cosmetics to homecare, personal

care, pet food and paint, pigging is increasingly being used to increase yields, reduce waste, speed up changeovers, and improve environmental performance. And as the video shows, pigging delivers high ROI with exceptionally fast payback periods.

Pigging works by recovering product from process pipelines. This product would otherwise be discarded and flushed to waste. The technology uses a pig, which is a solid, specialist projectile that contains a flexible magnetic core. It has a diameter slightly larger than the pipe that is transporting the liquid.

As the pig is propelled through the pipeline under pressure, it pushes out the product remaining in the line while cleaning the pipeline walls at the same time.

This results in increased production capacity, less waste, reduced water, chemical and energy consumption as well as better operational efficiency. And as the case study demonstrates, this translates into major financial savings.

Gilbert Murphy, CEO of process pigging specialists HPS, commented,

“The results that the customer is getting from the HPS solution are fantastic. For a one-off investment in a pigging solution, they are saving \$500,000 every single year, meaning they are now more competitive than ever”

“Product waste is at an all-time low, waste handling and disposal costs are far less, and they are now able to meet their economic, operational and sustainability objectives”.

As well as offering many benefits, HPS pigging systems are easy to implement with minimal disruption to plant operations.

Gilbert concludes,

“If you choose HPS as your pigging system provider, we can confidently say that our solutions will give you a high ROI and will save you time and money”.

“We also pride ourselves on our customer care and after-sales support. So, our customers have the confidence and peace of mind that we’ll support them every step of the way”.
