Series 5 Technology Offers Industry-Leading Wordpress Management and Wordpress Support

Series 5 Technology specializes in Wordpress management and Wordpress support regardless of whether you're a website owner, a freelancer, or an agency.

RAEFORD, NC, USA, January 4, 2019 /EINPresswire.com/ -- Series 5 Technology's primary focus is to provide reliable Wordpress Support and Wordpress Management for their clients. These services can provide a range of different things such as cloud backups done every day, security monitoring at all times, updates and optimization of the sites, custom development and more. With these services, Series 5 Technology will take care of the technical parts of their clients' businesses, leaving them to be focused on actually running their company.

Although many firms in the industry provide great services, they don't put their focus on granting both technical support and emergency response when the sites of their clients are compromised with issues. Shawn Morgan from Series 5 technologies wants to be a partner that provides all of that along with top-notch Wordpress Management and Wordpress Support.

Their motto is "we support and manage your website so you can focus on running your business" and according to the many satisfied customers, Series 5 Technology does succeed in their motto.

According to Shawn Morgan, their Wordpress maintenance activities include WordPress updates, Plugin, and Theme updates, content updates, and all of that supported with weekly reports. The clients are the ones that choose what gets updated, and Series 5 Technologies makes sure that they back up all the information before initiating the updating process or any other activities.

"After we check for compatibility issues, we carefully update WordPress after each new release is available. This ensures all the core security and feature updates are applied as quickly as possible. We do weekly Plugin & Theme updates during low-traffic hours, in order to ensure that your site says up and stable during prime time. We update the existing content on your website, including text, images, video, and other items. If you need to add a product to your WooCommerce store, we can help with that, or need to change the logo on your website; we can do that too. We provide weekly reports on backups, updates, security, uptime, and performance, so you know exactly what's going on with your WordPress site" said Shawn Morgan.

The interested clients can go to the website of the company and acquire one of the many plans and pricing opportunities and the best thing is that companies can do a testing of Series 5 Technology for 30 days, and if the clients are not impressed or satisfied with the services they received the money will be returned to the client. Companies can try any of the support plans that are offered on the website for free.

"I appreciate the attention to detail that Series 5 Technology provides. They make customer service and troubleshooting a high priority. Any time we have a hiccup with our website, it's resolved within hours, not days or weeks. This keeps our business running smoothly and helps us focus on serving our clients" stated on of the clients of the company.
