

# Venga Paging and Messaging System Version 5.5.20 Released

---

*AppleButter Software has released version 5.5.20 of its popular Venga office paging and messaging system.*

BROWNSVILLE, MINNESOTA, UNITED STATES, January 5, 2019 /EINPresswire.com/ -- AppleButter Software has released version 5.5.20 of its popular Venga office paging and messaging system.

Along with Venga's typical computer paging functions, version 5.5.20 adds the ability to clear a selected staff member (white or red border around their button) by clicking on the application title bar. It changes the maximum number of displayable message icons from 16 to 24 and contains a number of bug fixes to make Venga run more seamlessly.

Venga is a discrete messaging software that uses unique colors and sounds to streamline communication. It improves patient flow, eliminates the need for overhead paging, and ultimately helps its users run a more productive practice. Its interface is simple fun to use and proven effective. Venga uses an office's existing computer network to create a powerful, real-time communicator.

Originally developed over 17 years ago for state-of-the-art dental, medical, chiropractic, and eye care offices, Venga has become one of the most flexible, feature-rich pieces of software available today.

It is non-obtrusive and streamlines the office workflow, helping employees communicate more clearly, more directly and even more discreetly than ever before.
