

# CyberGuard360 Releases CyberGlass SIEM 2.0; Expanding Market Reach in Cybersecurity Detection and Backup and Recovery

*Partnership with Unitrends brings enterprise-class back and disaster recovery capabilities to the CyberGuard 360 platform*

WILTON, CT, USA, January 6, 2019

[/EINPresswire.com/](http://EINPresswire.com/) -- CyberGuard360, a firm which develops a solution set of products to detect and mitigate threats from cyber attacks, unveiled CyberGlass SIEM 2.0 late last year. The platform now integrates Unitrends' backup statistics and statuses to deliver critical insights into systems health and [disaster recovery](#) capabilities. The partnership with Unitrends, a Kaseya company, brings disaster recovery and business continuity services to the CyberGuard360 platform, while also broadening Unitrends' industry-leading, enterprise-class backup and disaster recovery solutions to the MSP and MSSP markets.

CyberGlass SIEM 2.0 is analytics-driven and provides [real-time monitoring](#) of threats across the entire technological domain --an organized means of reporting incidents, the ability to analyze large quantities of data to determine where issues/incidents are occurring and the specific tools to confront and deal with threats immediately from within the same platform.

Al Alper, CyberGuard 360 CEO

“This is an amazing step forward for all CyberGuard360 partners serious about disaster recovery and the very latest in cyber protection,” said Al Alper, CEO of CyberGuard360. “Fortune 100 companies rely on Unitrends every day to protect their data. This means that if CyberGlass identifies a threat which needs to be recovered from, or a backup that needs to be investigated, access to the Unitrends appliance and backups are just a click away. We have developed a superior product in CyberGlass and are pleased to expand its scope and reach even further with our work with Unitrends.”

“

This is an amazing step forward for all CyberGuard360 partners serious about disaster recovery and the very latest in cyber protection.”

*Al Alper, CEO, CyberGuard 360*

The integration with Unitrends comes on the heels of an

extensive research and development phase for CyberGlass, released to the market last year. CyberGlass is a first-to-market SIEM 2.0 solution in the ongoing world of cyber threats. The

platform covers cloud, perimeter, network, endpoints, and devices that interact and participate on the network. CyberGlass incorporates all traditional SIEM (Security Information and Event Management) components, adds protection components such as next-generation endpoint security, web and DNS security, Dark Web monitoring and much more, then overlays them with CyberGlassAL, an actionable interface that enables engineers to perform prescriptive and proactive remediation without ever having to leave CyberGlass. This design protects businesses from the growing and dangerous threat of cyber attacks on their infrastructure by including the entire security stack in its implementation. CyberGlass SIEM 2.0 incorporates all of the traditional SIEM tools with real-time information monitoring and management and further builds with the inclusion of top-level functionality that includes protection and remediation capabilities. Additionally, the management component incorporates powerful scripting and automation which have been previously used only by MSPs and enterprise IT departments using third party tools. "Where traditional SIEM 'sees something, says something,' CyberGlass' SIEM 2.0 actionable interface 'sees something, does something,'" said Alper.

#### About CyberGuard360

CyberGuard360 is a cybersecurity company that designs and builds cybersecurity products and services to enable enterprise IT departments and channel partners who are charged with protecting the companies they serve from the cyber threat landscape. Founder/CEO Al Alper launched this separate company to address a need he has seen in the market – for a strong cyber security protection suite of technology and services that can be managed within a single-pane-of-glass; obviating the need to use 5 or more systems to protect an enterprise. The company was also designated as a Champion of National Cyber Security Awareness Month (NCSAM) 2017 and has expansive experience with and knowledge of cyber regulations such as New York State's Department of Financial Services' new cyber security regulations (23 NYCRR 500). CyberGuard360 maintains offices in Wilton, CT and Larchmont, NY, as well as other satellite locations throughout the region.
