SIP Print Announces Integration with Jive Communications® Mobile and AWS

SIP Print Group Inc. in conjunction with Mereo Networks announces the successful completion of integration with Jive Communications® and AWS recording services.

ORANGE, CA, UNITED STATES, January 8, 2019 /EINPresswire.com/ -- SIP Print Group Inc., the leading manufacturer of [Cloud based call recording](#) systems and Mereo Networks, an industry leader in the design, installation and service of SIP based business telephone systems are pleased to jointly announce the completion of integrating Cloud based call recording with Jive Communications ® for remote users stored in the AWS Cloud.

SIP Print Group Inc. is widely recognized as the industry leader in Cloud based call recording by providing an affordable plug-and-play appliance which offers system-level voice recording for businesses, non-profit organizations and government & municipalities. As organizations increasingly turn to Unified Communications, compliance and regulatory changes, and corporate quality programs drive strong demand for call recording, SIP Print Group is well positioned as a leading provider of affordable Cloud based and on-premise solutions to record and archive calls on Unified Communications and Unified Communications as a Service platforms.

"We are delighted to reach this milestone with our longstanding and key partner, Mereo Networks. While this is important for us both, we view this as a stepping stone towards an even greater reach within Unified Communications as a Service Market" said Nancy Griffith, Senior Vice President of Sales for SIP Print Group, Inc. "As the workforce continues to become more and more mobile, the need for enterprise level call recording persists. This integration allows Enterprise Jive customers to record customer and prospect interaction independent of the User's modality. And there is literally no client installation required. So regardless of one's location, Jive customers can utilize the power of Enterprise call recording. We feel that our partnership with Mereo Networks will allow for us both to continue to deliver the most valuable solutions to the Unified Communications market."

"Our customers and prospective clients expect the same level of functionality, quality and control over their communication and collaboration experiences, whether they are using a desk phone at the office, PC soft client or their mobile phone on the road.   This integration with Jive and AWS remote call recordings provides a seamless, unified view of the entirety of their customer interactions. We can now offer a single interface for all call recordings, providing ease and control of access the market expects. Further, being able to instantly permanently pull recordings off AWS for secure on-site storage alleviates compliance and regulatory issues that can arise out cloud stored sensitive data" said Ryan Barbuto, Vice President of Operations for Mereo Networks. "That's one of the main reasons we've been strategic partners with SIP Print for so long. Their 'customer first' orientation really meshes perfectly with the Mereo Network's mentality."

About SIP Print
SIP Print is redefining the call recording with the industry's first and only Cloud based call recording system tailored to small and medium-sized businesses with up to 200 seats per location. SIP Print appliances offer; easy installation, simple maintenance and operation, and scalability to support the expansion of high-growth SMBs. While calls are searchable and playable from the Cloud based web portal, all media is stored locally within the customer

network. The SIP Print Cloud Call recording is compatible and easily integrated with the industry's leading Unified Communications systems and supports leading Hosted Voice providers as well. The company's affordable, one-of-a-kind call recording systems are available through distributors, resellers and OEMs worldwide.
