

Sagenext Prepares for Tax Season 2019: Upgrades its Cloud Architecture to Windows Server 2016

By upgrading from Windows Server 2012 R2 to more advanced OS, Sagenext aims for better server speed, performance and login time with improved user experience.

AUGUSTA, GEORGIA, UNITED STATES, January 9, 2019 /EINPresswire.com/ -- Sagenext Infotech, one of the widely recognized [QuickBooks hosting providers](#), has confirmed that they have upgraded their server operating system by moving to the latest Windows Server 2016 from Windows Server 2012 R2. With this successful transition of server technology, the company is looking forward to improving various parameters of its cloud hosting to deliver an unparalleled experience to the users this tax season. These functional and technical upgrades are surely going to boost application accessibility, processing speed, and uptime of the servers along with ensuring smoother GUI and improved user experience.

Designed and developed by Microsoft, Windows Server 2016 is the most innovative server operating system that has revolutionized the way networked or hosted applications run on the cloud. What sets Windows Server 2016 apart from previous server technologies is that it comes loaded with highly advanced features including two native containers:

1. Windows Server Containers
2. Hyper-V Containers.

Windows Server Containers run on the operating system directly but they are isolated from one another. On the other hand, Hyper-V Containers render better isolation and operate from a Hyper-V virtual machine (VM), allowing nested virtualization facility. Also, it offers new and advanced security measures like Shielded VMs to protect the content within the VM in a multi-user environment. Sagenext, by making this switch, has added more power to its cloud architecture to deliver uninterrupted facility for both the shared and dedicated hosting users.

Speaking at an event, Chief Technical Officer of Sagenext Infotech, Jack Jasteen said “One really cannot emphasize enough on the usefulness of cloud technology in the modern accounting industry, and the dependency increases multi-folds during busy tax season. Day in and day out, we keep on looking for new and innovative ways to streamline tax and accounting operations of our valued clients. And, by upgrading to the latest Windows Server 2016, we are focused on taking the QuickBooks and [tax software hosting](#) services to a whole new level”.

He further added, “Being a tried and tested platform with lightweight nature, Windows Server 2016 consumes minimum server resources while delivering the highest level of security and reliability. Moreover, it comes with revamped GUI and users will feel like working on their local desktop when using Windows Server 2016.”

As a part of their research and development program, Sagenext has already begun the testing phase of the latest server release (Windows Server 2019) and is planning to roll it out in the near future. The singular aim of the company is to enhance the user experience and meet the ever-increasing hosting demands of the clients.

About Sagenext Infotech LLC
