

UK's largest Crypto Cloud mining company doubles server capacity

ST SAMPSON, GUERNSEY, UNITED KINGDOM, January 11, 2019 /EINPresswire.com/ -- Island Crypto, a division of BITCOIN (GUERNSEY) LIMITED, doubled their crypto-mining capabilities today with their provisioning of a further 718 Orion 3 Bitcoin miners. Island Crypto, based out of Guernsey, chose Orion miners as their strategic business partners due to the efficiency the miners have over other miner types and are regarded as the current best ASIC crypto miners. Orion miners are built using custom chip design with emphasis on reliability that delivers better performance and efficiency.

Island Crypto recently installed 250 servers in Iceland, 155 servers in Armenia, as well as 313 servers in the Transnistrian Moldovan Republic. Utilising the cheap electricity costs involved in these data centers improves the profit of each bitcoin and other cryptocurrencies mined.

Island Crypto have also placed a pre-order of another 500 of the next generation Orion 5 mining servers to be deployed at the end of April 2019. These will join the existing mining servers provided by Bitfury's Blockbox AC previously utilised.
