

HMS Software has Announced the Publication of a New White Paper on the Integration Between TimeControl and Primavera

New information has been released on the integration between TimeControl and Primavera as well as enhancements to their TimeControl/Primavera Resource Portal.

MONTREAL, QUEBEC, CANADA, January 11, 2019 /EINPresswire.com/ -- HMS Software, the publisher of [TimeControl](#), one of the world's most popular timesheet systems has announced the enhancement of its TimeControl/[Primavera](#) Resource Portal and the publishing of a new [white paper](#) on TimeControl/Primavera integration.

Our partnership with Primavera is one of the oldest and most productive technical alliances in the project management industry.”

Chris Vandersluis

Oracle-Primavera EPPM administrators know that a Primavera timesheet for task updates is already included when you purchase the EPPM Team Member license. But there are many business scenarios where using a third party timesheet can maximize the investment in

Primavera. HMS Software has been a Primavera partner since 1997. In the last 22 years, the work between the two firms has resulted in a level of integration that increases the value of both products when used together.

TimeControl is a multi-function timesheet that is already integrated to both Oracle-Primavera EPPM and Primavera Pro. It was created to bring timesheet functionality even further.

Now HMS has extended its free TimeControl Primavera Portal with an all-new white paper explaining how the integration of the world-class TimeControl Timesheet and world-class Primavera project management system can benefit users.

“Our partnership with Primavera is one of the oldest and most productive technical alliances in the project management industry,” explains Chris Vandersluis, President of HMS Software. “We have had our technical teams working together since the late 90’s and in that time we have been able to service tens of thousands of users who use Primavera for project management but needed more in the collection of labor actuals. There are many scenarios where the combination of these two tools is the ideal solution.”
