Aircraft health monitoring systems (AHMS) collect data in real time from the aircraft fleet and make it available to ground operations. Various sensors are installed at various damage hotspots throughout aircraft structure/engine, which provide an early detection of anomaly (or initiation of crack/fatigue). Thus, necessary preventive measures can be implemented on-time, which reduces the chances of critical damage and major system failure.

On the basis of IVHM technology, the CBM & adaptive control segment is projected to grow at the highest CAGR during the forecast period, as the information provided by the CBM helps the aircraft operators perform maintain specific component of an aircraft on real-time basis rather than depending on the historical data.

The global Aircraft Health Monitoring Systems (AHMS) market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
