Description:-

Investment casting is a foundry process by which a metal part is produced from a ceramic (investment) mold that has been formed by a disposable (wax or plastic) pattern.

They are products using the lost wax process which is a process for producing near-net-shape metal parts. Investment casting process is an industrial process in which high technology waxes are used to form patterns that allow the production of components with accuracy, repeatability, versatility, and integrity in a variety of metals and high-performance alloys.

Investment casting is used to manufacture parts ranging from turbocharger wheels to golf club heads, from electronic boxes to hip replacement implants.

Scope of the Report:

Various investment casting plants are available for casting on which various, for example aluminum and copper-based, all alloys, but also special alloys and pure metals can be cast. The main advantages of precision casting are weight reduction, increase in stability, freedom in design and cost reduction.

China is a big investment casting production country, but it is not strong country. According to our research and analysis, manufacturers from United States and Europe are the major leaders in the international market of investment casting. Manufacturers from China are immature in technology. There is large space in the China market, as well as big gap between international brands and local brands on price.

In application, investment casting downstream is wide and recently investment casting has acquired increasing significance in various fields of automotive, aerospace & military, Industrial Gas Turbines and general industrial machinery and others. There is a big price gap in different application field. The United States local high-end manufacturers account for large share of the revenue market though they hold small consumption volume share of United States.

Globally, the investment casting market is mainly driven by growing demand for general industrial machinery which accounts for nearly 63.20% of total downstream consumption of investment casting in global.

In the future, global market is expected to witness significant growth on account of rising applications, so in the next few years, investment casting consumption will show a trend of steady growth. In 2023 the sales of investment casting is estimated to be 2426 K MT. On product prices, the slow downward trend in recent years will maintain in the future.

The worldwide market for Investment Casting is expected to grow at a CAGR of roughly 3.6% over the next five years, will reach 24500 million US\$ in 2024, from 19800 million US\$ in 2019, according to a new GIR (Global Info Research) study.
