Ambulatory services market growth is majorly driven by factor such as growing requirement of ambulatory surgical visits. According to the Centers for Medicare and Medicaid Services 2016, about 20 million surgical procedures and around 35 million ambulatory surgical visits were performed in hospital outpatient departments (HOPDs), with approximately 15 million surgeries performed in ambulatory surgery centers (ASCs). Moreover, cost-saving surgeries compared to the hospitals, government investment for ambulatory care facilities, and rising government funding offering team-based primary care are another major factors enhancing the global market growth.

Additionally, the increasing geriatric population with rising occurrence of chronic diseases requiring medical attention, new reimbursement policies by the government offering economic advantage, and adopting advanced technology, are the factors further propelling the growth of the global market. Furthermore, the growing demand for non-invasive and minimally invasive surgeries, inexpensive surgical costs, well equipped ambulatory service centers, and faster patient recovery time is expected to drive the market during the forecast period.

The Ambulatory Services market is segmented by service type which include primary care offerings, emergency departments, outpatient departments, medical specialty, and surgical specialty. In 2017, the primary care offerings accounted for the majority share and dominated the market. This was followed by the surgical specialty segment which gained traction due to the technological advancements of the same-day surgeries for cataract and orthopedic issues.
