## Introduction

### Global CMOS Camera Module (CCM) Market

A CMOS Camera Module (CCM) is a device that converts an optical image into electronic video signals. These electronic signals are then converted into digital data on the display of a digital imaging device for users to store as a digital image. The booming demand for mobile phone, smartphones, multimedia tablets and other mobile devices has driven the demand for camera modules, which are the core components for built-in digital cameras and have become one of the key differentiating factors for such devices. The CMOS camera module is comprised of a complex integration of optical, electronic, and mechanical technologies.

LG Innotek, SEMCO, Sharp and LITEON captured the top four revenue share spots in the CMOS Camera Module market in 2015. LG Innotek dominated with 16.54 percent revenue share, followed by SEMCO with 14.41 percent revenue share and Sharp with 7.22 percent revenue share.

Despite the presence of competition problems, due to the clear global recovery trend, investors are still optimistic about this area, in future still more new investment will enter into the field. Technology and cost are two major problems.

Although sales of CMOS Camera Module brought a lot of opportunities, for the new entrants with only advantage in capital without sufficient support in technology and downstream channels, the research group did not recommend taking risk to enter this market.

According to this study, over the next five years the CMOS Camera Module (CCM) market will register a 5.2% CAGR in terms of revenue, the global market size will reach US\$ 25 million by 2024, from US\$ 19 million in 2019. In particular, this report presents the global market share (sales and revenue) of key companies in CMOS Camera Module (CCM) business, shared in Chapter 3.
