Spinning Machinery Market 2019

Textile machinery includes a wide range of equipment such as spinning, weaving, texturing, knitting, and finishing machinery, which are used in different stages of manufacturing textiles based on their function. Short-staple spinning, long-staple spinning, and open-end rotors are the three types of spinning machinery. Short-staple spinning machinery is used for producing fiber from raw materials such as cotton. Long-staple spinning machinery is used to spin fibers like wool, acrylic, and blends of fibers.

During 2017, the short-staple spindles segment accounted for the major shares and dominated the textile spinning machine market. This spindle is used for spinning yarns from cotton, polyester, viscose, and other blends. The increased production of these fibers is one of the major reason that will increase the demand for short-staple spindles in the coming years.

According to this market research and analysis, APAC accounted for the major revenue and dominated the spinning machinery market during 2017. The presence of a number of manufacturers who offer a wide range of products in China and the availability of cheap labor in India are some of the major reasons fueling the growth of the textile industry in this region, which will consequently aid in the growth of the market. Analysts predict that the region will continue to dominate the market throughout the predicted period as well and China, India, Vietnam, Pakistan, Bangladesh, and Indonesia will be the major revenue generating countries.
