Executive Summary

Smart cards are pocket-sized cards that are embedded with integrated circuits. Smart cards can be used in many sectors such as banking, financial services, and insurance (BFSI); transportation; government; and healthcare for identification and authentication. They provide individuals with authorized access to secured premises of an organization to ensure data security and confidentiality. Smart cards are used for various applications such as payments and transit ticketing.

During 2017, the contact-based segment accounted for the major shares of the smart cards market. The high adoption of contact-based smart cards for access controls and identification will be the major factor contributing to the growth of this industry segment in the coming years. This in turn, will have a positive impact on the smart cards market size and share.

The telecom industry will be the major end-user segment to the smart cards market until 2023. The increasing demand for cellular phone connections drives the segment's growth in this global market. The demand for smartcards is directly connected with the demand for smartphones and tablets as these cards are integrated within the devices.
