PUNE, MAHARASHTRA, INDIA, March 13, 2019 /EINPresswire.com/ -- Global Clutch Housing Market

The clutch housing is metal case which is used for covering the clutch and the flywheel mechanism. Clutch housing is also known as bell housing as it looks a somewhat similar to the shape of the bell. The key function of the clutch housing is to protect the clutch and flywheel mechanism from the dirt, water and pollution of the environment. Clutch housing is bolted to the engine block and is usually made up of metals such as cast iron or aluminium. Clutch housing is manufactured by cold forming of thick metals. The alignment of the clutch housing is relative to the flywheel axis, and this is done with the help of bolts, collars, and locating pins. The clutch housing should be designed and manufactured in such a way so that it ensures good airing and ventilations for cooling the friction surfaces inside the assembly. Moreover, it should also have proper openings to remove the wear products from the mechanism.
