The majority of online dating services are a freemium model where users get registered and use it for free till the user wants to subscribe to the added benefits of the subscription model. With increasing number of users opting for the subscription model, vendors do not share all their

offerings with their users who still use it for free. This has resulted in an extremely low probability of a match for freemium users, which makes them want to opt for a subscription model. With the steady revenue stream offered by the subscription users to the vendor, they are tempted by the idea of tinkering with the matchmaking algorithm, which would enable more users to subscribe to their service.

The global Online Dating Services market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Online Dating Services.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
