PUNE, INDIA, March 13, 2019 /EINPresswire.com/ --

[3D Cell Culture Industry 2019](#)

Description:-

A 3D cell culture is an artificially-created environment in which biological cells are permitted to grow or interact with their surroundings in all three dimensions. Unlike 2D environments (e.g. a petri dish), a 3D cell culture allows cells in vitro to grow in all directions, similar to how they would in vivo. These three-dimensional cultures are usually grown in bioreactors, small capsules in which the cells can grow into spheroids, or 3D cell colonies. Approximately 300 spheroids are usually cultured per bioreactor.

Scope of the Report:

The global 3D cell culture market is relatively concentrated; the sales of top nine manufacturers account about 68.23% of total global Production in 2016. The largest manufacture of 3D cell culture is Thermo Fisher Scientific; its Production is 252.73 K Unit in 2016. The next is Corning and Lonza Group.

North America is the largest consumption region of 3D cell culture in 2016. In 2016, the sales of 3D cell culture is about 470 K Unit in North America; its sales proportion of total global sales exceeds 36%.The next is Europe. Asia has a large growth rate of 3D cell culture.
