A Hospital Information Systems (HIS) is a digital integrated system which is design to manage all aspects of hospital operations such as administrative, financial and stores data for patient’s medication and inventory of the medical store. There is a shift from the traditional approach of paper-based manual operations to IT-based solutions in hospital management. HIS are basically designed to manage all the information such as administrative and inventory functions, which allows the healthcare provider to do their work effectively. In addition, it supports managing patient profiles, processing and billing and inventory workflow. Factors motivating the growth of hospital information system market include an increase in demand of people for better qualities of healthcare services. Growing adoption of cloud-based HIS across various segments of the healthcare sector is also another factor which drives the growth of this market. Complex installation and maintenance cost and lack of skilled IT professionals in the healthcare industry at present are major restraining factors which may affect the growth of this market. Currently, the adoption of EHR, eHealth platforms, and web-based technology are the major opportunities for this market. In addition, the increased funding and initiative by the government and major players in providing better healthcare services also contribute to the growth of this market in forecast year.
